

We are looking for a Procurement Specialist (m/f/d)

Our parent company Statkraft has been producing renewable energy since 1895. Today we are using this renewable energy to power our electric vehicle charging solutions. In Norway and Sweden we have the second largest EV charging operator Grønn Kontakt in our family. In UK we are providing charging points with 100% renewable energy from our own portfolio. In Germany eeMobility and E-WALD are offering employee car fleet solutions, public charging and carsharing services.

For this stable and well-equipped rapidly growing international group we are looking for a

Procurement Specialist (m/f/d)

As the procurement specialist, you deal with determination of needs of the company as well as procurement of technical products (supply of goods and services). You will support the further development of strategic services from a purchasing perspective. You understand our services and products as an overall system and optimize in cooperation with our suppliers. You will develop a very good understanding of our product and service portfolio and your location will be in one of our group's offices in Teisnach or Munich.

Your Responsibilities:

You have a good overview of the charging infrastructure technologies (electromobility) market and use this to derive the selection of materials and service providers for the development of our portfolio. You will be responsible for the following fields:

- Lead of sourcing activities, including but not limited to supply market analysis, supplier analysis, RFI/RFP building, negotiations, baseline analysis, contracting, building business cases
- Negotiation & implementation of supplier contracts on a country, partly European level and lead of supplier business relationships
- Negotiation of prices, contracts and terms of payment as well as the optimal logistics
- Searching, developing and managing strategically relevant suppliers
- Creation of framework contracts for suppliers and service providers
- Selection of suppliers and service providers and looking after these relationships at industry events
- Building of sustainable partnerships with our business partners and suppliers
- Managing the coordination of material requirements and purchases on the basis of the inventory
- Retrieval of order quantities / preparation for retrieval by third parties
- Technical selection of hardware components
- Working closely with the legal department for contracts assistance
- Market analysis and overview

What we offer:

Creative and challenging tasks in a highly qualified and dynamic team as well as performance-based pay. You can expect an innovative environment in an expanding company with numerous opportunities for professional and personal training and further education with flat hierarchies and fast decision-making paths. The working atmosphere is characterised by its team orientation and the pleasant working atmosphere.

Your Profile:

- Industrial engineer or business economist with a technical background
- Successfully completed a university degree with focus on electrical engineering or a comparable field of study
- Several years of professional experience in the energy industry or electromobility
- At least three years experience as procurement manager
- Pronounced project experience in interdisciplinary teams and a purposeful way of working and willingness to travel
- Strong communication skills in English and German, both verbal and written
- International experience
- Joy and motivation to work in a young company
- Interest in the topic of electromobility
- Orientation across Europe

Have we sparked your interest? Then we look forward to receiving your application, stating your availability and salary expectations via email to
